

We guitarists put a huge amount of time and effort into choosing our guitars. Of course we do. But do we always think enough about our choice of capo?

Guitar necks come in different shapes and sizes - fingerboard curvature, string gauge, neck profile, height of action and fret height - a capo should be able to accommodate them all. If your capo doesn't match your guitar you'll end up with tuning problems or buzzing strings.

What if there was a capo that would **actively adapt its string pad** to match the curvature over the strings in **EVERY position, on ANY guitar neck**?

MEET THE NEW **PERFORMANCE 3** CAPO WITH ADAPTIVE RADIUS TECHNOLOGY^{ART} A PERFECT FIT ON EVERY GUITAR, EVERY TIME
